OBJECTIVE

I'm a Software Engineer with expertise in Java, Python, Dart, and frameworks like Flutter and Spring Boot. With a Computer Science degree from BRAC University, I also have experience in SQL and Firebase. I'm eager to apply my skills and enthusiasm to a new role where I can grow and make a meaningful impact.

EDUCATION

Bachelor of Computer Science, BRAC University 2018 - 2023

SKILLS

Language Skills	Java, Javascript, Python, Dart, Html, CSS
Database Skills	SQL, Firebase
Soft Skills	Problem-Solving, Presentation Skills, Flexibility

EXPERIENCE

Software Engineer September 2024 - Present
Vista Systech

As a Web Developer at ANA-Soft, I have worked extensively with ASP.NET to develop and maintain several dynamic websites, including the [UGC](#) Equivalence portal. My role involved both back-end and front-end development, focusing on enhancing functionality, performance, and user experience.

Web Developer May 2024 - August 2024
ANA-Soft

As a Web Developer at ANA-Soft, I have worked extensively with ASP.NET to develop and maintain several dynamic websites, including the [UGC](#) Equivalence portal. My role involved both back-end and front-end development, focusing on enhancing functionality, performance, and user experience.

PROJECTS

AI Agent

Developed an **AI Agent** integrating Monica's API to analyze product images from URLs, extracting or generating product names and crafting concise descriptions. This enhanced the user experience by automating product identification and information retrieval. ([Git](#))

Meta Post

Developed a **React** application integrating **Meta's Graph API**, enabling users to authenticate and seamlessly publish content to their Facebook Pages and associated Instagram accounts, thereby streamlining cross-platform social media management. ([Git](#))

BetterThat Ecosystem Projects

Worked on multiple production-grade **React** applications under the BetterThat umbrella as a frontend developer. Responsibilities included building dynamic interfaces and full **API** integrations.

- [Food for Change](#)
- [Fishing in Godzone](#)
- [Ditybit Auctions](#)
- [Auckland Rescue](#)

WhatsApp Bulk Messenger

Developed a fullstack messaging tool. Implemented logout and message history functionality, along with a responsive and clean UI design.

SewingTex React Conversion – [SewingTex](#)

Converted a complete **HTML**-based website to a React SPA with integrated APIs for dynamic content rendering.

Evocart – [Evocart](#)

Developed subdomain-specific layout logic, implemented responsive UI updates, and handled API integrations. Implemented AI agent functionality, integrated **Meta Graph API**, and exposed RESTful APIs for frontend usage.

Physics Department, BUET – [phy.buet.ac.bd](#)

Enhanced parts of the departmental website by making static components dynamic, improving maintainability and UX.
